DANIEL G. CHESLEY,
Town Treasurer.

Epsom, March 1, 1880.

We hereby certify that we have examined the accounts of of the selectmen and treasurer of the town of Epsom, for the year ending March 1, 1880, and found them correctly cast and properly vouched.

SAMUEL MARTIN, }
HENRY F. SANBORN, } *Auditors.*

SCHOOL REPORT.

Your committee has endeavored to discharge his duty the past year, and presents to you for consideration the following report:

No epidemic or contagious disease has rendered it necessary to close any of our schools, while other towns have been less fortunate. Our schools in general have not been more or less successful in securing good teachers than heretofore—while some districts have had better, others have had poorer teachers. To avoid conflicting opinions between superintending and prudential committees, and the ill feeling and evil influences caused by refusing a certificate, would it not be better to examine teachers before employing them, rather than have them rejected, perchance, a short time before their schools are to begin? By the present dual system, many unqualified teachers obtain certificates to avoid the little unpleasantness which is sure to follow a refusal. For the want of something better, a superintending committee of two or more might be chosen, who might require a public examination of teachers, and if any one cannot answer correctly a certain per cent. of previously prepared questions, they could bear the responsibility of rejecting better than a committee of one. Something, evidently, must be done, or our examination will become a farce or an opportunity for the display of automatic power. In my report of the different schools and teachers, my endeavor has been to do simple justice to all, to be partial to none, and to bestow credit or censure upon those who deserve it.

DISTRICT NO. 1.—CENTER.

Number weeks of school: summer, 10 3-5; winter, 13 1-2.
Number scholars: summer, 32; winter, 37. Wages of teachers: summer, per month, \$27; winter, \$40. Average attendance: summer, 28 1-5; winter, 33 2-3.

The summer term was taught by Miss Luella M. Ewings, of New York. This teacher governed her school well and labored industriously for the welfare of her pupils and deserved better success than she attained. Her dialect, somewhat peculiar and at variance with ours, but common in other parts of our country, grated the ears of some fastidious minds and caused unfavorable remarks that lessened the esteem of her pupils. The most of her classes appeared well and made fair improvement.

Winter Term.—Mr. Daniel G. Chesley, teacher. A veteran of nearly a quarter of a century, who possesses a patience and untiring industry united with a critical and practical knowledge of the branches taught, which rank him pre-eminent as an instructor. This school contains more advanced scholars than any other in town. The attendance has been very regular, which clearly indicates a continued interest kept up by the teacher. Mr. C. has done more for the education of the younger portion of his district than any other teacher.

DISTRICT NO. 2.—CILLEY.

Length of schools: summer, 8 weeks; winter, 13 weeks. Number of scholars: summer, 38; winter, 39. Average attendance: summer, 36 1-8; winter, 33 1-3. Wages per month: summer, \$19.50; winter, \$24.

Summer Term.—Mrs. Lizzie M. Warren, teacher. Mrs. Warren is a teacher of high reputation and possesses keen mental attainments acquired by long experience in teaching. With so many classes as this school contains and so difficult to govern, great improvement cannot be secured, and if scholars make fair progress, what more is required of a teacher? The advancement of all her classes equaled my anticipations.

Winter Term.—Miss Ella F. Chesley, teacher. This teacher has had much experience in teaching, both in this and other towns. She realized the amount of labor required of her to govern and instruct this school, and by her physical power and determination she secured the one, and in a good measure imparted the other. Her reading classes were made to un-

derstand what they read and then taught how to read, for the art of reading is the absence of art. Miss Chesley states that if this school could be classified with uniform books, four times the progress might be made in less time.

DISTRICT No. 3.—MOUNTAIN.

Length of school in weeks: summer, 8; winter, 11. Number of scholars: summer, 23; winter, 23. Whole number in district, 29. Average attendance: summer, 18; winter, 22 1-6. Wages: summer, \$14; winter, \$17.60.

Summer Term—Miss Nellie M. Marden, teacher. This is Miss Marden's debut as a teacher. Her order was excellent and every work was done with clock-like precision. Some of her classes made commendable progress, others did too much work to be thoroughly understood. But few teachers do better than this one in their first school.

Winter Term.—Mrs. Ella F. Tarlton, teacher. This school was fortunate to secure the services of a Massachusetts Normal School graduate. She did an immense amount of work by writing so many examples and exercises upon the black-board, for written arithmetic and other classes. In arithmetic, by this course, a new impulse was given as they were taught to rely upon themselves and form their own rules. Geography was taught by wall maps and questions written upon slips of paper. Composition and written spelling were neatly executed. One class in reading, the best in town. No doubt this was one of the most profitable schools ever taught in this district.

DISTRICT No. 4.—SHORT FALLS.

Length of school in weeks: summer, 10; winter, 16. Number of scholars: summer, 28; winter, 31. Whole number in the district, 33. Average attendance: summer, 23 1-2; winter, 25 9-11. Wages: summer, \$22; winter, \$30.

Summer Term.—Miss Nettie R. Jones, teacher, a graduate of Plymouth Normal School. On our first visit this school appeared well and the prospect was flattering that we should receive some benefit from our "Normal School." Her order

was good and scholars industrious. A few made some progress but many had but little interest or energy and no doubt were glad when school was done.

Winter Term.—Mr. Charles S. Adams, teacher. A young man of good mental qualifications but not much experience in teaching. He was energetic and did his work thoroughly. His closing examination clearly evinced good progress in arithmetic, both mental and written. One class in grammar and analysis did credit to themselves and teacher. Progress was evidently made in all other studies. There is no reason why he will not become one of our best teachers.

DISTRICT No. 5.—NEW ORCHARD.

Miss Lucy F. Morse, teacher of both terms. Length of schools: summer, 7 weeks; fall, 9 weeks. Number scholars: summer, 8; fall, 5. Average attendance: summer, 7; fall, 4. Wages per month, \$20.

Although this school is small its teacher could excite an interest and find enough to do. Great interest was manifested in writing and the best improvement made. Our last visit found but five scholars, still this small number (perhaps in honor of your committee) produced a paper composed of the compositions of the term, and a chapter of chronicles well written, an oration delivered and a farce played. Good progress was made.

DISTRICT No. 6.—UNION. (With Pittsfield.)

DISTRICT No. 7.—NORTH ROAD.

Miss Addie L. Howe, teacher of both terms. Length of schools: summer, 8 weeks; winter, 10. Number of scholars: summer, 15; winter, 15. Average attendance: summer, 12; winter, 11. Wages per month, \$20.

Always kind and pleasant, a strong attachment grew up between this teacher and her pupils. The scholars all loved her too well to disobey or displease her. They played around the hill of science as they did their temple of learning, and their minds rose but little higher. A class in Colburn's Mental Arithmetic knew as little about some problems they attempted

to solve as a modern Choctaw Indian knows of the ancient Sanscrit. The reading classes received little or no drilling and some scholars could read nearly as well at the close as at the beginning of the year.

DISTRICT NO. 8.—FOWLER.

Length of school in weeks: summer, 8; winter, 16. Number scholars: summer, 6; winter, 11. Average attendance: summer, 53¹/₄-40; winter, 105-8. Wages: summer, \$20; winter, \$20.

Summer Term.—Miss Alice E. Ladd, teacher. Some persons can impart instruction readily and in plain, concise and appropriate language. Such was this teacher, and her happy faculty of leading her scholars on till they forgot their book and reasoned for themselves was as rare as it is commendable. Notice failed to reach me, and did not visit this school at its close. The district seemed perfectly satisfied, and I judge the money was well invested.

Winter Term.—Miss Mary I. Dearborn, teacher. This district takes more interest in its school, contributes more and is better united, than any other district. In consequence of which they have better teachers, better school and better scholars. Instead of hearing complaints and grumbling on visiting their district, their earnest enquiry always is: "How is our school doing?" "Have we got a good teacher?" &c. Should all our districts do likewise, our schools would soon improve their condition. A class in philosophy and an algebraic class in the mysteries of quadratics can be found here—not to the neglect of other studies, however. All classes made good progress. I do not hesitate to say that Miss Dearborn is a successful teacher.

DISTRICT NO. 9.—NEW RYE.

Whole number of scholars in summer, 15; winter, 17. Average attendance: summer, 13; winter, 163-5. Wages: summer, \$16; winter, \$32. Number weeks of school: summer, 10; winter, 97-10.

Summer Term.—Miss Etta E. Wells, teacher. Her first term of teaching. Her school was small, and many of her

pupils in their rudiments. At one of my visits I found but five or six scholars present. Answers were promptly given to all questions. She did her work with a woman's patience, and accomplished all that could be done, and a satisfactory progress was made.

Winter Term.—Mr. Charles W. Tarlton, A. M., teacher. The winter term was delayed some weeks till the new school house was completed. It seemed fitting that so nice and convenient a house should have for its first teacher so accomplished a scholar, of so much experience in all grades of schools. Mr. Tarlton has a method of teaching peculiar to himself, and is always clear and comprehensible in his explanations and illustrations. Nothing was seen in his school to criticise, and everything to approve. Grammar, geography, and written arithmetic, were all taught by topic. Not being confined to text-books, gave rise to many practical and synthetical questions, which few, if any, know how to ask better than he. By this method, an interest is always awakened. His answers were required to be promptly given, and if not pertinent, were corrected by some pleasant repartee or suggestion.

DISTRICT NO. 10.—MARDEN.

Miss Emma G. Drake, teacher of both terms. Length of school in weeks: summer, 7; winter, 9. Number scholars: summer, 9; winter, 9. Average attendance: summer, 8.96; winter, 8. Number scholars in district, 12. Wages: summer, \$12; winter, \$14. Miss Drake possesses an energy and an indomitable perseverance, that is indispensable to a successful teacher. Herself a good reader, she is most interested in reading classes, in which all improved. The classes in arithmetic are most all dull, but by continued drilling appeared well. Geography classes made excellent progress. With so persevering a teacher as Miss Drake, this school would soon show some very good scholars.

REMARKS.

It will be required of me to report to the State that two school-houses (in Nos. 1 and 5) are unfit for school purposes.

One unfit to have a winter school in and the other but little better. It has been said that one would not hold a pig. The other would freeze him if it did. As one new school house has been built the past year in No. 9, may two be built the present year. Other districts need better interior accommodations, which can be supplied at small expense, and would add much to their comfort. All need outline maps, globes, and a sufficient surface of blackboards in good condition. With a few of these aids, much more might be accomplished by the teachers.

New Rye district, the past year, has built a model school house, and supplied it with some of the modern improvements, besides purchasing a beautiful site to locate their house upon. Every district should have an equal amount of schooling; each boy and girl in town have a right to this which we are yearly refusing. Why should a boy in one district have twenty-six weeks schooling, while another in a smaller has only sixteen? Can any valid reason be assigned for this? Clearly not. Several States give each scholar in the town an equal amount of schooling. This town needs a free high school within its limits for advanced scholars, and those that can pass a certain examination. This would be a stimulus to our youth which is much needed. Perhaps some former resident who may have become rich since leaving the home of his youth, and desiring a perpetual monument to his memory would bestow a legacy upon us to establish such a school. But no one will do this till we do something for ourselves. Let us improve our schools in every way possible. We cannot do too much to educate our youth. How then can we elevate our schools? Not necessarily by raising more money, but by judiciously expending what we do raise, by employing the best teachers, by furnishing the best books, and insisting upon a regular attendance.

All of which is respectfully submitted,

CYRUS O. BROWN,
Superintending School Committee.

Epsom, March 1, 1880.
